

It's an inherent part of the cultural landscape of Scandinavia: this idea that in all things there should be a sense of proportion and balance, of all elements working cohesively together – while keeping a keen eye on the future. Primare embodies this culture in its holistic design approach, a unique characteristic of the company from its inception.

This approach now results in the creation of the 60 Series – statement products that are extraordinary in and of themselves. But informing each individual design is the understanding that it must function within a system; where the sum must always be greater than its parts and no single component should draw attention to itself. This sense of synergy informs every aspect of the 60 Series design and production.

Technical Specifications

PRE60 PREAMPLIFIER

Analogue Inputs: 2 pair XLR (L & R); 4 pair RCA (L & R)
Digital Inputs: 1 Coax; 3 Toslink; 1 USB-B; 1 USB-A; 1 WLAN;
1 LAN – Ethernet; 1 Bluetooth®

Analogue Pre Output: 2 pair RCA (L & R); 2 pair XLR (L & R)

Analogue Record Output: 1 pair RCA (L & R)

Digital Output: 1 Coax

Other In/Outputs: RS232; IR in/out; Trigger in/out

Input Impedance: 15k ohm both RCA and XLR

Output Impedance: 110 ohms

Frequency Response: 20Hz – 100kHz -3dB

THD + N: < 0.003%, 20Hz – 100kHz, 0dB gain

Signal to Noise: -115dBV

Max In /Out Level: 10Vrms

Gain: 16dB

Power Consumption: Standby, 0.5W; Operate, max 38W

Dimensions (WxDxH): 430 x 385 x 142mm; 16.93 x 15.16 x 5.59 inches

Colour Options: Two-Tone and Full Black

A60 POWER AMPLIFIER

Output Power: 2x250W 8 ohm / 2x500W 4 ohm (both channels driven)

THD+N: <0.02% (1kHz 250W 8 ohm) / <0.002 (10W 8 ohm)

Output Impedance: 0.01 ohm

Input Impedance: 20k ohm

Signal to Noise: 20Hz – 20kHz unweighted -105dBV

Gain: 26dB Unbalanced; 20dB Balanced

Power Consumption: Standby, 0.5W; Operate, 32W

Dimensions (WxDxH): 430 x 385 x 142mm; 16.93 x 15.16 x 5.59 inches

Colour Options: Two-Tone and Full Black

Designed and hand crafted in Sweden

60 SERIES

It lies within us all, that sense of perfect balance, of all things in harmony.

When things simply feel right.

Lagom is the Swedish word for this. Not too much. Not too little. Just right.

The 60 Series celebrates Primare's 30-year pursuit of *lagom* within each and every one of the components that it designs and builds – the best expression yet of that sense of balance and harmony, of simple perfection.

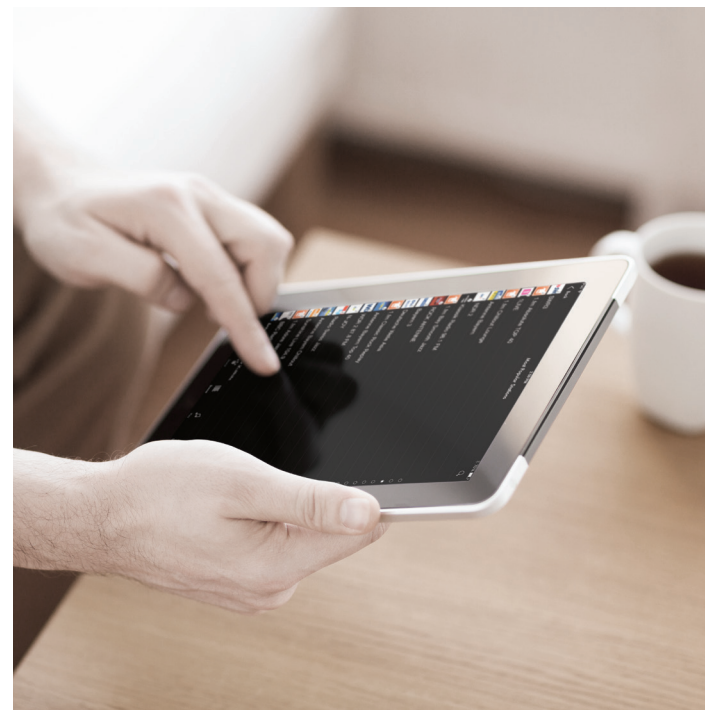

Lagom – you will know it when you see and hear Primare's 60 Series.

THE 60 SERIES

Revealing the world of music around you.

Entirely designed and hand built in Sweden, the PRE60 preamplifier and A60 amplifier are the culmination of all that Primare has learned in over three decades of producing components of exemplary quality and performance.

The goal was simple – to take that accumulated knowledge and experience and focus on building the company's most thoroughly modern and revealing products yet, all while retaining Primare's inherently musical sound. The 60 Series is a resounding statement and the next step in Primare's evolution in creating products for which every aspect of design and implementation has been carefully considered and tested.

The PRE60 – embracing the world of music around you.

The PRE60 is a supremely sophisticated system control center that effortlessly brings the ever-expanding world of music to your system in all its richness and variety. Due to Primare's careful attention to detail, whether the source is analogue or digital, the sound of the PRE60 is unfailingly accurate and convincing: truer to the recording – truer to life.

The PRE60's integrated DAC/media board offers virtually every possible option for digital playback of the highest resolution, be it streamed or stored media; even allowing for instantaneous connection of handheld devices. In designing this third-generation media board, Primare has carefully tailored the filtering to reveal every bit of musical information from every digital source.

The PRE60 – controlling the world of music around you.

For easy system setup and operation, the OLED display on the PRE60 provides critical system information in a crisp and clear adaptive presentation when using the system remote.

The Primare App takes your control of the PRE60 to the next level, allowing you to operate the system from your favorite handheld device – including playing streaming services, stored digital media, and thousands of Internet radio stations.

Bluetooth® wireless technology further adds to the ease of exploring, sharing, and enjoying music by allowing for instant connection and playback from enabled mobile devices.

The A60 – delivering the world of music around you.

The A60 employs the latest version of Primare's ground-breaking UFPD (Ultra Fast Power Device) amplification module in a balanced configuration of four discrete amplifiers – two per channel. With this seventh generation of the UFPD, Primare has realized its fullest potential, taking complete advantage of its capacity to provide instantaneous current delivery and extremely low distortion, resulting in a naturally fast, clean, and agile sound.

Powering the UFPD modules is an equally unique power supply utilizing Primare's Active PFC (Power Factor Correction) technology. So efficient is this technology that it allows for virtually unlimited power delivery to the amp modules without draining power from or injecting noise into the line, ensuring that any system integrating the A60 will deliver the ultimate in precision and impact.

The 60 Series – designed and built with concern for the world around you.

The 60 Series wraps this finely crafted technology in compact cabinets of elegant proportion and striking simplicity. Primare's expertly developed technologies, executed in skillfully crafted designs, provide the highest level of performance and ease of use, while harmoniously integrating into the most stylish of home environments.

Fully designed and constructed in Sweden, with consistent use of Earth-sensitive and sustainable production techniques and technologies – such as power supplies that require fractions of the power ordinarily needed to run components of such sophistication – the 60 Series provides the comfort of knowing these state-of-the-art components are created with an active concern for the natural environment.
